

# In the Growers Own Words...

This is Phil Murray. He grows over 1400 acres of peanuts in and around Pearson, Ga. That's about 20 miles south of Douglas, Ga. He used TETRA Micronutrients' MAN-GRO on all his peanuts last year and this year.

Phil said even with last year's hurricanes he averaged close to 4000 lbs per acre harvested. Several fields were harvested early, before 15 inches of rain and yielded close to 5000 lbs of peanuts. He also felt that he had better nut retention after the excessive rains and gives credit to manganese provided by MAN-GRO.

Phil's peanuts graded in the high 70 SMK's (Sound Mature Kernels)
